An outstanding new variety that is undoubtedly the best spreader to be offered to the trade in recent years. Somewhat vase-shaped, it remains low and relatively flat across the top. The foliage is dark green and fine compared to other yews, and the branching is smaller, forming a dense center with no holes. Its over-all character is symmetrical and easy to maintain, since the branching is not coarse. We recommend our strain of Taxus 'fieldsi' as an outstanding contribution to the landscaping industry.
